Test 13

## Viking ships

The Vikings came across the North Sea to the British Isles from Norway, Sweden and Denmark. In those days many people were afraid of the sea, but the Vikings had made ships which were able to sail across rough seas safely.

The Viking warships, called 'longships', were wide and flat-bottomed. So that they could sail close to the beaches, and had a large sail which meant that they could travel very quickly. As the compass had not been invented, the Vikings navigated by looking at the stars or sun. When the ships were in battle, they would have a dragon head fixed to the front of the boat, or the prow. This was taken off in port because the sailors thought it brought bad luck.

The Vikings became bolder as their ships became faster. They sailed up the River Thames and attacked London. They also sailed along the River Seine in France to attack Paris.

As well as longships, the Vikings had 'traders' and 'ferries'. We know this from the remains of vessels found buried in the mud.
